

## Basic Policy for the Environment

Throughout all our businesses, we, the Mitsuboshi Belting Group, aim to realize a sustainable society, undertake environmental preservation activities from a global perspective, and work to create a company that contributes to society based on our corporate philosophy “to give attentive consideration to both humanity and nature.”

### **1. Maintenance of environmental management system**

We maintain an environmental management system that functions effectively and manage the environmental preservation activities that are developed in all businesses under this system.

### **2. Fulfillment of compliance obligations**

We comply with environmental laws and regulations, agreements with stakeholders, and internal rules/guidelines.

### **3. Cooperation with stakeholders**

We actively promote cooperation with stakeholders with the aim of ensuring the achievement of our environmental goals and targets we have set for issues in our environmental preservation activities, including conserving resources/energy and curtailing substances that have an environmental impact.

We also actively engage in activities to achieve coexistence with the local community.

### **4. Utilization of technological capabilities**

We apply the know-how and technology cultivated as a manufacturing company to environmental preservation activities with a “product life cycles” perspective.

### **5. Implementation of continuous improvements**

Throughout all our businesses, we identify and monitor environmental impacts, make continuous improvements, and ensure that we achieve our environmental goals and targets.

We make certain the employees of the Mitsuboshi Belting Group are aware of this basic environmental policy through the environmental management system. We also disclose it outside the company in a form that is easily available to all stakeholders.
